

Keep Your Planter, Improve Performance, Save Money.

Buying new planters is expensive and usually the row units and technology are the only things that need to be upgraded. The Precision Planting Ready Row Unit is a solution that allows you to keep your existing planter frame, but upgrade to new row units and technology, for a fraction of the cost of a new planter. You'll have the planter that you want and save a ton of money.

Planter frames last a long time, but row units need to be maintained in order to ensure that each seed is planted and can thrive. Planter technology also needs to be maintained to capture the yield and profitability advantages technology provides. When the row units are past normal maintenance and you need a row unit to put the industry's best technology on, replace your old row units with the Precision Planting ready row unit.

Build It Your Way

Precision Planting control systems that ensure that your seeds emerge consistently and are placed properly are easily added to the Precision Planting Ready Row Unit. Precision Planting fertilizer control and placement systems are also easily added so that you can build a planter that is high performance, without the high cost of a new machine.

The Precision Planting Ready row unit provides the ideal platform to build a planter specialized for your farm, one that fits your specific needs, without the expense of a new machine.

ReadyRowUnit
