

Adjust Your Row Cleaners From The Cab

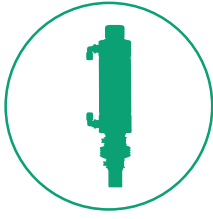

Setting row cleaners correctly is time consuming and frustrating. CleanSweep allows you to make row cleaner adjustments from the cab, eliminating the frustration of getting row cleaners set, saving you time while planting.

We have all been there, with bloody knuckles and a bumped head from trying adjusting every row cleaner on the planter. After a couple tries, you just say forget it, they are doing a good enough job.

Improve Emergence Consistency

When it comes to your seed's germination being consistent, good enough doesn't cut it. Each seed that has residue against it will germinate and emerge late, costing you yield. Properly adjusted row cleaners remove surface residue so it doesn't get hair-pinned in the furrow by your planter's disk openers.

With an air cylinder on each row cleaner and control in the cab, you can get your row cleaner's pressure set correctly for any condition, without taking the time to get out of the cab, and without getting bloody knuckles. Apply down pressure to the row cleaners if needed, or lighten them up with lift pressure in mellow conditions. You'll eliminate frustration, save time, and see improved emergence consistency with CleanSweep
